## **DETAILED ACTION**

### ***Priority***

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on May 21, 2002. It is noted, however, that applicant has not filed a certified copy of the Japan 2001-161742 application as required by 35 U.S.C. 119(b).

### ***Claim Objections***

1. Claims 12 and 13 are objected to because of the following informalities: the term "detectsthe" in claim 12 should be -- detect the --. In claim 13, the term "oscillatorOLE\_LINK1" should be -- oscillator --. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Okumura (US 5,433,369).

Okumura discloses the method and apparatus for wire bonding comprises a device for ultrasonic vibration, applying pressure between the metallic wire and the device and simultaneously applying a vibratory force thereto, detecting degree of bonding, and stopping the

application of ultrasonic vibration and pressure in response to the detection of completion of the state of bonding. The device further comprises a semiconductor chip and the metallic wire is welded to a bonding pad. The bonding is determined from an abrupt change of the waveform of the feedback signal (col. 3, lines 11-50).
